Calculating Hessians

TOTAL POINTS 5

1. In this quiz, you will calculate the Hessian for some functions of 2 variables and functions of 3 variables.

1 / 1 point

For the function $f(x,y)=x^3y+x+2y$, calculate the Hessian matrix $H=\begin{bmatrix} \partial_{x,f} & \partial_{x,f} & \partial_{x,f} \\ \partial_{y,f} & \partial_{y,f} \end{bmatrix}$

$$\bigcirc H = \begin{bmatrix} 0 & 3x^2 \\ 3x^2 & 6xy \end{bmatrix}$$

$$H = \begin{bmatrix} 6xy & 3x^2 \\ 3x^2 & 0 \end{bmatrix}$$

$$OH = \begin{bmatrix} 6xy & -3x^2 \\ -3x^2 & 0 \end{bmatrix}$$

$$\bigcirc H = \begin{bmatrix} 0 & -3x^2 \\ -3x^2 & 6xy \end{bmatrix}$$

✓ Correct

Well done!

2. For the function $f(x,y)=e^x cos(y)$, calculate the Hessian matrix.

1 / 1 point

$$\bigcirc H = \begin{bmatrix}
-e^x \cos(y) & -e^x \sin(y) \\
e^x \sin(y) & -e^x \cos(y)
\end{bmatrix}$$

$$\bigcirc H = \begin{bmatrix} -e^x cos(y) & e^x sin(y) \\ -e^x sin(y) & -e^x cos(y) \end{bmatrix}$$

$$OH = \begin{bmatrix} -e^x \cos(y) & -e^x \sin(y) \\ -e^x \sin(y) & e^x \cos(y) \end{bmatrix}$$

$$H = \begin{bmatrix} e^x cos(y) & -e^x sin(y) \\ -e^x sin(y) & -e^x cos(y) \end{bmatrix}$$

✓ Correct

Well done!

3. For the function $f(x,y)=rac{x^2}{2}+xy+rac{y^2}{2}$, calculate the Hessian matrix.

1 / 1 point

Notice something interesting when you calculate $\frac{1}{2}[x,y]H\begin{bmatrix}x\\y\end{bmatrix}!$

$$O_{H} = \begin{bmatrix} 1 & -1 \\ -1 & 1 \end{bmatrix}$$

$$H = \begin{bmatrix} 1 & 1 \\ 1 & 1 \end{bmatrix}$$

$$H = \begin{bmatrix} 1 & 0 \\ -1 & 1 \end{bmatrix}$$

$$O_H = \begin{bmatrix} 1 & 0 \\ 0 & 1 \end{bmatrix}$$

Well done! Not unlike a previous question with the Jacobian of linear functions, the Hessian can be used to succinctly write a quadratic equation in multiple variables.

$$\bigcap_{} H = \begin{bmatrix} 2xe^{-y}cos(z) & -2e^{-y}cos(z) & -2e^{-y}sin(z) \\ -2e^{-y}cos(z) & x^2e^{-y}cos(z) & x^2e^{-y}sin(z) \\ -2x^2e^{-y}sin(z) & x^2e^{-y}sin(z) & -2xe^{-y}cos(z) \end{bmatrix}$$

$$H = \begin{bmatrix} 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & 2xe^{-y}sin(z) \\ 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & x^2xe^{-y}sin(z) \\ 2xe^{-y}sin(z) & 2xe^{-y}sin(z) & 2xe^{-y}cos(z) \end{bmatrix}$$

$$\bigcirc H = \begin{bmatrix} 2e^{-y}cos(z) & 2xe^{-y}cos(z) & 2xe^{-y}sin(z) \\ 2xe^{-y}cos(z) & x^2e^{-y}cos(z) & x^2e^{-y}sin(z) \\ 2xe^{-y}sin(z) & x^2e^{-y}sin(z) & x^2e^{-y}cos(z) \end{bmatrix}$$

✓ Correct

Well done!

5. For the function $f(x,y,z)=xe^y+y^2cos(z)$, calculate the Hessian matrix.

$$\bigcap_{H=\begin{bmatrix}0&e^y&0\\e^y&xe^y+2cos(z)&2ysin(z)\\0&2ysin(z)&y^2cos(z)\end{bmatrix}}$$

$$\bigcap_{H=\begin{bmatrix}0&e^y&0\\e^y&xe^y+2sin(z)&-2ycos(z)\\0&-2ycos(z)&-y^2sin(z)\end{bmatrix}}$$

$$\Theta = \begin{bmatrix} 0 & e^y & 0 \\ e^y & xe^y + 2cos(z) & -2ysin(z) \\ 0 & -2ysin(z) & -y^2cos(z) \end{bmatrix}$$

$$H = \begin{bmatrix} 0 & e^y & 0\\ e^y & xe^y + 2sin(z) & 2ycos(z)\\ 0 & 2ycos(z) & y^2sin(z) \end{bmatrix}$$

✓ Correct

Well done!
